

Contents

| | | |
|------------------|---|-----------|
| Chapter 1 | Introduction | 1 |
| | <i>Fred J. Davis, Saeed D. Mohan and Muaathe A. Ibraheem</i> | |
| 1.1 | Polymer Fibres | 1 |
| 1.2 | Principles of Electrospinning | 3 |
| 1.3 | Equipment for Electrospinning | 4 |
| 1.4 | Processing Parameters | 7 |
| 1.5 | Materials | 11 |
| 1.6 | Characterisation of Fibres | 14 |
| 1.7 | Health and Safety | 16 |
| 1.8 | Applications | 17 |
| 1.9 | Summary | 18 |
| | References | 18 |
| Chapter 2 | Glossary of Terms | 22 |
| | <i>Jonathan Stanger and Fred J. Davis</i> | |
| Chapter 3 | The Development of Electrospinning Technologies for Commercial Application | 34 |
| | <i>Nick Tucker</i> | |
| 3.1 | Introduction | 34 |
| 3.2 | John Francis Cooley | 39 |
| 3.3 | William James Morton | 42 |
| 3.4 | Kiyohiko Hagiwara | 42 |
| 3.5 | Anton Formhals | 43 |
| 3.6 | Charles Ladd Norton | 46 |
| 3.7 | Petryanov Filters | 47 |
| 3.8 | Fred W Manning | 48 |

| | | |
|------------------|--|-----------|
| 3.9 | 1944–1970 USA | 48 |
| 3.10 | 1976–1987 Europe | 50 |
| 3.11 | Current Times 1990s | 53 |
| | Acknowledgements | 53 |
| | References | 54 |
| Chapter 4 | Optimising Solutions for Electrospinning | 57 |
| | <i>Stuart R. Coles and Andrew Wooldridge</i> | |
| 4.1 | Introduction | 57 |
| 4.2 | Feedstock Properties | 58 |
| 4.2.1 | Solution Concentration | 59 |
| 4.2.2 | Molecular Weight and Surface Tension | 60 |
| 4.2.3 | Conductivity | 62 |
| 4.3 | Experimental Setup | 62 |
| 4.3.1 | Flow Rate | 62 |
| 4.3.2 | Electric Field Strength | 63 |
| 4.3.3 | Grounded Collector Design | 64 |
| 4.3.4 | Fibre Collection Methodology | 64 |
| 4.4 | Environmental Conditions | 66 |
| 4.4.1 | Temperature | 66 |
| 4.4.2 | Humidity | 67 |
| 4.5 | Conclusion | 69 |
| | References | 69 |
| Chapter 5 | Polymer Network Dynamics during Electrospinning: Random Walk Simulation | 71 |
| | <i>Israel Greenfeld and Eyal Zussman</i> | |
| 5.1 | Introduction | 71 |
| 5.2 | Random Walk Simulation of Polymer Chains | 72 |
| 5.2.1 | Background | 72 |
| 5.2.2 | Theoretical Basis | 75 |
| 5.3 | Single Chain | 76 |
| 5.3.1 | Chain under Tension | 76 |
| 5.3.2 | Free Chain in a Flow Field | 79 |
| 5.4 | Network in a Flow Field | 82 |
| 5.4.1 | Polymer System and Forces | 82 |
| 5.4.2 | Network Dynamics | 86 |
| 5.4.3 | Analytic Approximation | 89 |
| 5.5 | Discussion and Conclusions | 90 |
| 5.6 | Appendix: Random Walk Simulation Tool | 93 |
| 5.6.1 | Program and Examples | 93 |
| 5.6.2 | Network Simulation Procedure | 96 |
| | Acknowledgements | 97 |
| | References | 97 |

| | | |
|------------------|---|------------|
| Chapter 6 | Design and Fabrication of Scaffolds <i>via</i> Melt Electrospinning for Applications in Tissue Engineering | 100 |
| | <i>Paul D. Dalton, M. Lourdes Muerza-Cascante and Dietmar W. Hutmacher</i> | |
| 6.1 | Background | 100 |
| 6.2 | Scaffold Design and Fabrication | 101 |
| 6.3 | The Melt Electrospinning Process | 102 |
| 6.4 | Fibre Homogeneity and Uniformity | 105 |
| 6.5 | Melt Electrospinning Configurations | 105 |
| 6.5.1 | Heating Systems | 106 |
| 6.5.2 | Applied Voltage | 107 |
| 6.5.3 | Collection Distance | 107 |
| 6.5.4 | Spinneret Diameter | 108 |
| 6.5.5 | Temperature | 108 |
| 6.5.6 | Flow Rate | 108 |
| 6.5.7 | Collector Type | 108 |
| 6.6 | Melt Electrospinning Writing | 109 |
| 6.7 | 3D Architectures and Structures for TE Scaffolds | 110 |
| 6.8 | Applications of Melt Electrospun Scaffolds in Tumour and Tissue Engineering Applications | 111 |
| 6.9 | Conclusion | 115 |
| | Acknowledgements | 116 |
| | References | 116 |
| Chapter 7 | Electrospinning of Nanoparticles | 121 |
| | <i>Daniel Crespy</i> | |
| 7.1 | Introduction | 121 |
| 7.2 | Principles and Preparation Procedures | 122 |
| 7.2.1 | Principles | 122 |
| 7.2.2 | Aggregation State of the Nanoparticles in the Feed and in the Fibres | 123 |
| 7.2.3 | Morphologies of the Fibres and of the Colloids in the Fibres | 123 |
| 7.3 | Relevant Characterization Techniques | 128 |
| 7.3.1 | Aggregation State of the Nanoparticles in the Electrospinning Feed | 128 |
| 7.3.2 | Aggregation State of the Nanoparticles in the Fibres | 128 |
| 7.4 | Selected Applications of Colloid-electrospinning | 129 |
| 7.4.1 | Catalysis, Energy Production and Conversion | 129 |
| 7.4.2 | Antiwetting | 132 |
| 7.5 | Biomedical Applications | 132 |
| 7.6 | Conclusions and Perspectives | 132 |
| | References | 133 |

| | | |
|------------------|---|------------|
| Chapter 8 | Structure Development in Electrospun Fibres | 136 |
| | <i>Geoffrey R. Mitchell, Saeed D. Mohan, Fred J. Davis, Kyung-Hwa Ahn, Mohamed Al-Azab, Ahmed El Hadi, Delyth Elliott, Mahadevappa Y. Kariduraganavar, Anitha Nagarajan and Meruyert Nazhipkyzy</i> | |
| 8.1 | Introduction | 136 |
| 8.2 | Structure Development Transferred from Solution | 137 |
| 8.2.1 | Polymers in Solution | 137 |
| 8.2.2 | Cluster Formation in PEO-based Aqueous Solutions | 141 |
| 8.2.3 | Hydrogen Bonding | 142 |
| 8.3 | Structure Development During Electrospinning | 143 |
| 8.3.1 | Use of a Rotating Collector | 143 |
| 8.3.2 | Porosity | 148 |
| 8.3.3 | State of the Fibre at Solidification | 150 |
| 8.3.4 | Shape of Fibre | 152 |
| 8.3.5 | Nanophase Separation in Block Copolymers | 155 |
| 8.3.6 | Electrospun Nanocomposites | 156 |
| 8.3.7 | Chain Trajectories | 156 |
| 8.3.8 | Blends and Additives | 159 |
| 8.3.9 | Semicrystalline Polymers | 162 |
| 8.3.10 | Temperature | 166 |
| 8.4 | Structure Development Post Electrospinning | 166 |
| 8.4.1 | Residual Solvent | 166 |
| 8.4.2 | Structural Transformation Using Solvent Vapour Treatment | 166 |
| 8.4.3 | Cross-linking | 168 |
| 8.4.4 | Other Chemical Reactions | 168 |
| 8.5 | Summary | 169 |
| | Acknowledgements | 169 |
| | References | 169 |
| Chapter 9 | Organized Assembly of Electrospun Nanofibres: From 1D to 3D | 172 |
| | <i>Salima Nedjari, Anne Hébraud and Guy Schlatter</i> | |
| 9.1 | Fibre Alignment | 173 |
| 9.1.1 | Electrostatic Forces | 173 |
| 9.1.2 | Magnetic Forces | 177 |
| 9.1.3 | Mechanical Forces | 178 |
| 9.2 | 2D Patterned Nanofibrous Membranes | 181 |
| 9.2.1 | 2D Composites Formed from 1D Aligned Fibres | 181 |

| | | |
|-------------------|--|------------|
| 9.2.2 | Complex 2D Patterned Membranes by Precise Control of Electrostatic Forces | 181 |
| 9.2.3 | Self-assembly of Electrospun Fibres | 185 |
| 9.3 | Towards 3D Nanofibrous Constructs | 188 |
| 9.3.1 | Specific Electrospinning Processes for 3D Constructs | 189 |
| 9.3.2 | 3D cm-thick Scaffolds from Self-assembled Electrospun Fibres | 190 |
| 9.4 | Conclusions and Perspectives | 192 |
| | References | 192 |
| Chapter 10 | Properties of Electrospun Polymer Fibres | 196 |
| | <i>Asa H. Barber</i> | |
| 10.1 | Introduction | 196 |
| 10.2 | Mechanical Properties of Electrospun Fibres | 197 |
| 10.3 | Thermal Properties of Electrospun Fibres | 201 |
| 10.4 | Surface Properties of Electrospun Fibres | 203 |
| 10.5 | Properties of Electrospun Fibre Networks | 205 |
| 10.6 | Conclusions | 210 |
| | References | 211 |
| Chapter 11 | Electrospinning for Medical Applications | 214 |
| | <i>Wenhui Song, Geoffrey R. Mitchell and Krishna Burugapalli</i> | |
| 11.1 | Regenerative Medicine | 214 |
| 11.1.1 | Tissue Engineering | 215 |
| 11.1.2 | Electrospun Scaffolds for Tissue Engineering | 215 |
| 11.1.3 | Interactions between Electrospun Scaffolds and Cells | 218 |
| 11.1.4 | Vascular Tissue Engineering | 222 |
| 11.1.5 | Wound Dressings and Skin Tissue Engineering | 223 |
| 11.1.6 | Bone Tissue Engineering | 224 |
| 11.1.7 | Neural Tissue Engineering | 225 |
| 11.2 | Drug Delivery | 225 |
| 11.2.1 | Nanofibrous Drug Delivery System | 225 |
| 11.2.2 | Release Kinetics of Fibrous Drug Delivery Systems | 231 |
| 11.2.3 | Targeted/Implantable Drug Delivery | 233 |
| 11.2.4 | Bio-drug/Gene and Stem Cells Delivery for Regenerative Medicines | 234 |
| 11.3 | Applications in Analytical Sensing | 235 |
| 11.3.1 | Sample Processing | 235 |
| 11.3.2 | Detection | 241 |
